

WOLF R1

Tactical robot

A new approach to mission support

For firefighting and recovery operations as well as major emergencies in the municipal or industrial sector, speed, safety, and flexibility are crucial. This is precisely where the Magirus Wolf R1 comes in. The tactical response robot allows emergency forces to remain outside the danger zone in conditions of hazardous material exploration, danger of collapse or intense heat development, while persevering on the spot with utmost precision. Specialised camera systems ensure that the operations command is always supplied with the latest live images and videos, while the fully electric drive moves the Wolf R1 purposefully and quietly on the most difficult surfaces and allows it to act flexibly, e.g. via robot arm.

Powerful chassis

- **Weight** 750 kg
- **Dimensions (L x W x H)** approx. 1,700 x 1,300 x 1,350 mm
- **Motor** 2 drive motors
Peak power: 2 x 7.5 kW, torque: 1,050 Nm each
- **Tractive force** 4 t
- **Battery** 8.8 kWh lithium-ion battery
Maximum operating time due to simple battery change without tools. Batteries with self-managing temperature management system.

Modular equipment concept

- **Camera systems**
 - 4 static directional cameras
 - Optional: 2 dynamic cameras for normal & thermal image transmission (0° to +/- 180° tiltable)
 - Optional: 360° tower camera with normal/thermal image (0° to +/- 90° tiltable)
- **Spotlight**
 - 12 LED spotlights with 1800 lumens each aligned in the direction of movement
 - Powerful LED ambient lighting
- **Control** Guided on sight by means of manual control unit (range: approx. 50 m) and/or from a system carrier vehicle via Magirus TacticNet range: approx. 2,500 m)
- **Communication** WLAN-based
- **Water/foam cannon** Up to 2,000 l/min at 10 bar (optionally expandable)
Throwing distance: approx. 65 m water, approx. 45 m foam
- **Cable winch** Approx. 1.8 t tractive force; extendable claw support for a safe stand for winch operation in connection with large loads

A wide range of options for every requirement

- Optimal in conjunction with the Magirus TacticNet mobile deployment network
- Drone escort with thermal image transmission for the best possible overview of the entire operational area
- Remote manipulator, e.g. for work and sampling at a safe distance
- Raman spectrometer for the detection of hazardous substances with remote-transmission capable evaluation
- Circumferential, robust hollow frame with application nozzles for self-protection: 50 l/min at 10 bar
- Attachable battery-powered fan unit with a circulation capacity of 102,800 m³/h and a running time of 4 hours.
- Trailer coupler
- Further equipment options upon request

The Wolf R1, in conjunction with the TacticNet tactical operations network, offers the optimum solution for complex situations.

Compact, manoeuvrable, and robust: the Wolf R1 is versatile and safe to use.

With a tractive force of up to 4 t, the Wolf R1 is a real powerhouse.
